

Space Rap

(Chorus): Say oh oh (oh oh)
Say Solar System
Say oh oh (oh oh)
On a rappin' mission (on a rappin' mission).

Planet number one is Mercury
And this is known through all the galaxy.
It's hot, it's hot, like a steaming pot.
So close to the sun you'd toast like a bun
So living there would not be fun!

(Chorus)

The planet Venus is hotter still.
If you lived there you would be ill.
A place of gas and acid rain
Living there would be a pain!

(Chorus)

The planet Earth is number three.
The green is the land, the blue is the sea.
The average temperature is twenty-two.
We live here and that is true!

(Chorus)

Planet number four is the red one, Mars.
The name is famous – it's on chocolate bars.
It's a planet that has its own volcanoes.
It may have life there but nobody knows.
